

ARETA RANGINUI CHARLTON

Ka Hao te Rangatahi: Exploring rangatahi voices and experiences of climate change

This research is contributing to the National Science Challenge Deep South Vision Mātauranga project, Haumanu Hauora. I have been working alongside a team led by Associate Professor Bridgette Masters-Awatere. My research will contribute to the wider project, which focusses on strengthening health institutions climate responsiveness with Māori. The aim of this rangahau is to explore rangatahi Māori perspectives and experiences of climate change, and attempts to answer the following research questions: What are some of the influences and motivators for rangatahi to engage in climate change spaces? What are some of the barriers and enablers that rangatahi identify? In what spaces are rangatahi contributing their voices?

Outputs: (1) Thesis submission, (2) Final summary of research sent to participants, (3) contribute to HH report, (4) collaborate on a publication from HH.
